

Dear Ron,

I received your new product the Hubble. I am familiar of course with the PHD & the PH3D's performance, which I believe to be the pinnacle of phono preamps. Again, as an avid vinyl aficionado, I was taken by the improvements within the new Hubble. The definition is uncanny. The imaging's 3-dimensionality is so life like that I dreamed I was at the concert. This is due to the blackness around each individual instrument or voice. Tonal balance as with the previous PHD is the best I have encountered. The bass detail was, here again, the best I've heard. My associated equipment was the Merrill/Scillia MS-2 with the Dynavector DV507MKII tonearm and DV20X cartridge. Truly this is the statement product for the reproduction of vinyl. You have done it! After my 37 years in the audio design field, I have found a near perfect product. Amazing.
